# Lifetime Microsoft Windows Server 2008 R2 With English Version Window Server 2008 Editions
Basic Information

- Place of Origin: Ireland
- Brand Name: Microsoft
- Certification: Microsoft Certified
- Model Number: windows server 2008
- Minimum Order Quantity: 5 pieces
- Price: Negotiable
- Packaging Details: Factory Sealed Retail box / OEM
- Delivery Time: 2-3 work days
- Payment Terms: T/T, Western Union, MoneyGram,
- Supply Ability: 3000 pieces / week

Product Specification

- Version: SQL
- Language: English
- Packing: Retail
- Media: 64Bit
- Delivery Time: In 24 Hours After Payment
- Shipment: DHL/EMS/Air Cargo
- Highlight: **windows server 2008 r2 standard, windows server standard 2008**

Product Description

Lifetime Windows SQL Sever 2008 R2 With Online Activation Warranty English Version

Windows Server 2008 Standard Edition

Windows Server 2008 Standard is one of Microsoft's entry level server offerings (alongside Windows Web Server 2008) and is one of the least expensive of the various editions available. Only a 64-bit versions are available, and in terms of hardware Standard Edition supports up to 32GB of RAM and 4 processors.
Windows Server 2008 is primarily targeted and small and mid-sized businesses (SMBs) and is ideal for providing domain, web, DNS, remote access, print, file and application services. Support for clustering, however, is notably absent from this edition.
An upgrade path to Windows Server 2008 Standard is available from Windows 2000 Server and Windows Server 2003 Standard Edition.

Windows Server 2008 Enterprise Edition

Windows Server 2008 Enterprise Edition provides greater functionality and scalability than the Standard Edition. As with Standard Edition, only a 64-bit version is available. Enhancements include support for as many as 8 processors and up to 2TB of RAM.
Additional features of the Enterprise edition include support for clusters of up to 8 nodes and Active Directory Federated Services (AD FS).
Windows Server 2000, Windows 2000 Advanced Server, Windows Server 2003 Standard Edition and Windows Server 2003 Enterprise Edition may all be upgraded to Windows Server 2008 Enterprise Edition.

Windows Server 2008 Datacenter Edition

The Datacenter edition represents the top end of the Windows Server 2008 product range and is targeted at mission critical enterprises requiring stability and high uptime levels. Windows Server 2008 Datacenter edition is tied closely to the underlying hardware through the implementation of custom Hardware Abstraction Layers (HAL). As such, it is currently only possible to obtain Datacenter edition as part of a hardware purchase.
As with other versions, the Datacenter edition is available only in a 64-bit version and supports up to 2TB of RAM. In addition, this edition supports a minimum of 8 processors up to a maximum of 64.
Upgrade paths to Windows Server 2008 Datacenter Edition are available from the Datacenter editions of Windows 2000 and 2003.

Windows Web Server 2008

Windows Web Server 2008 is essentially a version of Windows Server 2008 designed primarily for the purpose of providing web services. It includes Internet Information Services (IIS) 7.0 along with associated services such as Simple Mail Transfer Protocol (SMTP) and Telnet. It is available in a 64-bit version only and supports up to 4 processors. RAM is limited to 32GB.
Windows Web Server 2008 lacks many of the features present in other editions such as clustering, BitLocker drive encryption, multipath I/O, Windows Internet Naming Service (WINS), Removable Storage Management and SAN Management.

Windows Server 2008 System Requirements:

This software is intended for evaluation and deployment planning purposes only. If you plan to install the software on your primary computer, it is recommended that you back up your existing data prior to installation.
To use Windows Server 2008, you need:

Component	Requirement
Processor	• Minimum: 1 GHz (x86 processor) or 1.4 GHz (x64 processor) • Recommended: 2 GHz or faster **Note:** An Intel Itanium 2 processor is required for Windows Server 2008 for Itanium-Based Systems.
Memory	• Minimum: 512 MB RAM • Recommended: 2 GB RAM or greater • Maximum (32-bit systems): 4 GB (Standard) or 64 GB (Enterprise and Datacenter) • Maximum (64-bit systems): 32 GB (Standard) or 1 TB (Enterprise and Datacenter) or 2 TB (Itanium-Based Systems)
Available Disk Space	• Minimum: 10 GB • Recommended: 40 GB or greater **Note:** Computers with more than 16 GB of RAM will require more disk space for paging, hibernation, and dump files.
Drive	DVD-ROM drive
Display and Peripherals	• Super VGA (800 x 600) or higher-resolution monitor • Keyboard • Microsoft Mouse or compatible pointing device

Actual requirements will vary based on your system configuration and the applications and features you choose to install. Processor performance is dependent upon not only the clock frequency of the processor, but the number of cores and the size of the processor cache. Disk space requirements for the system partition are approximate. Itanium-based and x64-based operating systems will vary from these disk size estimates. Additional available hard-disk space may be required if you are installing over a network. For more information, see the Windows Server product site.

Installation and Activation

Evaluating Windows Server 2008 software does not require product activation or entering a product key. Any edition of Windows Server 2008 may be installed without activation and evaluated for an initial 60 days.

If you need more time to evaluate Windows Server 2008, the 60-day evaluation period may be reset (or re-armed) three times, extending the original 60-day evaluation period by up to 180 days for a total possible evaluation time of 240 days. After this time, you will need to uninstall the software or upgrade to a fully-licensed version of Windows Server 2008.
